

STAYLIT

CAN YOU CHANGE OUT A GAS METER WITHOUT CUSTOMER SERVICE INTERRUPTION?

Heath's new Staylit meter change-out system allows you to change out a meter without any service interruption. There is no need to enter the house to relight the pilot lights.

Staylit is a device that will allow the meter to be removed without interrupting the service to the home. While the meter is being changed out the gas will remain on keeping the required pressure needed for the appliances in the home to remain operational with no service interruption. As you remove the old meter, the enclosure fills with gas, so that constant pressure is maintained in the home gas lines. It has flexible, built-in gloves, and a viewing window so you can do the work efficiently.

By saving thousands of wasted hours and greatly reducing your need for call center interaction, the Staylit could save a typical gas company millions of dollars. Customers will like it better too; they don't have to take time off work, their gas stays on, there's less chance they'll have their appliances shut off or need to pay a contractor for repairs and the transition between meters is completely seamless. The result? Happier customers.

Benefits:

-  **No appointment needed**
-  **No missed appointments**
-  **No need to enter the house**
-  **No in-home liabilities**
-  **No hours of wasted time**
